Virtual reality training is better than conventional training.

Don't believe us? Check the reverse side.

We're bringing the cutting edge power of 3D virtual reality to the transit industry and taking training to an all new level.

Focused Technology Solutions leads the way in revolutionizing worker training with immersive virtual reality instruction.

We provide employees with thoroughly engaging learning experiences using real-life scenarios to help improve skills, achieve performance goals, and stay safe.

VIRTUAL REALITY TRAINING

IMMERSIVE INSTRUCTION, TAILOR-MADE TO FIT YOUR NEEDS.

PATENT PENDING

Virtual reality training is better than conventional training.

Don't believe us?

Just ask **Walmart, KFC, UPS, NASA,** or the **United States Air Force**, all of whom implemented or have begun to implement virtual reality in their training procedures. But we'll let them speak for themselves: ▼

Just read our benefits below. Our VR training is safer than field training and provides real-world experience anywhere and anytime without the need for track access or disrupting revenue service. Our virtual reality is shown to be exceptionally better when compared to traditional training methods such as textbooks, text-based web instruction, and even video instruction.

"When you watch a module through the headset, your brain feels like you actually experienced a situation. We've also seen that VR training boosts confidence and retention while improving test scores 10 to 15%"

-Andy Trainor, Senior Director of Walmart U.S. Academics

"Virtual Reality offers a big technological leap in the realm of driver safety training,"

-Juan Perez, CIO of UPS

"This is great hands-on training. The airmen get to see how they react to these various events (...) The technology is amazing."

-Heather Perez, USAF Tech. Sgt.

"We've been able to leverage VR and AR technologies (...) every single day. Immersive technology has incredible potential as a tool for scientists and engineers."

-Victor Luo, Lead Project Manager of NASA JPL

Tailor-made to fit your needs: We work with the customer to create custom-made training scenarios that represent its real-world counterpart to a T.

What are the benefits?

No safety risks compared to actual field training.
Learn from "real-world" experience without needing actual track access.

Learn at any time: no more need to disrupt revenue operation or implement roadway worker protection for training purposes.

Higher subject retention than traditional methods (videos, textbooks, etc.).

Far more economical than conventional training.

What's the application?

Solve for training procedures that are dangerous or costly to run: use our immersive virtual reality training for critical safety instruction that is safe, economical, and highly retentive.
