

THIRD RAIL COVER

COMPLETE PORTABLE THIRD RAIL PROTECTION FOR ALL

PATENT PENDING

Protecting track workers from exposure to the third rail is a critical life and death issue.

© Focused Technology Solutions 2019

Focused Technology Solutions' Third Rail Cover does not require power certified personnel to install and remove.

Agencies perform repairs on third rail equipped tracks using one of two methods:

- 1.** By having a work permit that allows work to be performed near a live, energized third rail,
- 2.** Or by working near a non-live, unenergized third rail even though it's expected to be energized at any time.*

Focused Technology Solutions' portable and simple Third Rail Cover is your new and improved alternative solution.

*Accidents happen and the third rail can become energized without warning, especially if proper procedures are not followed.

THIRD RAIL COVER

COMPLETE PORTABLE THIRD RAIL PROTECTION FOR ALL

PATENT PENDING

The amount of third rail protection that currently exists is sparse and varies in effectiveness.

Some agencies do not use any protection whatsoever on the third rail during repairs.

Others will utilize an extremely cumbersome "throw mat" that is bulky, not always effective, and sometimes requires one or more power certified personnel to install and remove.

The many problems of third rail mats:

- *Work delays from lengthy installation periods.*
- *Multiple sizes and shapes cause confusion.*
- *Extremely heavy, bulky and cumbersome.*
- *Rule 22 is easily violated and may cause adjacent track envelope.*
- *Requires one or more power certified personnel to install and remove.*

Focused Technology Solutions' portable and simple Third Rail Cover is the better alternative to solve the problem of the third rail:

It's lightweight, only takes seconds to install, stackable and can easily be installed by any transit work crews without the need for power certified personnel.

What are the benefits?

Ease of use: takes seconds for worker crews to install.

Sturdy yet lightweight construction.

Stackable for easy storage.

Insulated (non-conductive).

Fire resistant (per NFPA).

Removes the need for power certified personnel to install and remove.

What's the application?

Fully protect workers from the live third rail with a cover that is simple and portable.
